### Empathy Map Canvas:

In the Empathize and Discover phase, the project team closely observed how administrators and managers handle user deletion processes within the ServiceNow platform. During this observation, it was identified that many users experience frustration when attempting to delete accounts that are still associated with active incident records.

Through interviews and discussions with stakeholders, the team discovered that this challenge leads to delays, confusion, and additional workload, as users must manually identify and resolve incident associations before deletion.

These insights helped the team understand the real impact of this issue on overall workflow efficiency and data integrity. It also emphasized the need for improved system guidance, proactive alerts, and automated validation checks to prevent accidental deletions.

By understanding the users' challenges and pain points, the team was able to design a solution that is both practical and user-friendly, ensuring greater accuracy, accountability, and ease of use within the ServiceNow environment.

### Example:

The empathy map helped us understand user challenges when deleting assigned users. It shows their pain, actions, and needs for better control and alerts. This guided us to design a safer system that prevents accidental deletion.

### Example: Calculating family expenses

By deeply understanding the users through empathy mapping, we identified the key challenges and frustrations faced by families in managing and tracking their daily expenses. These insights revealed major pain points such as the **manual entry of expenses**, **lack of real-time tracking**, and **absence of automated summaries or alerts**.

As a result, we designed a more **intelligent and user-friendly system** in ServiceNow that integrates **automated calculations, categorized expense tracking, and real-time reporting**. This ensures that all family expenses are accurately recorded and easily accessible at any time, thereby **improving financial transparency, enhancing efficiency, and increasing user satisfaction** in managing household finances.
